

Enlightened Futures Trading.

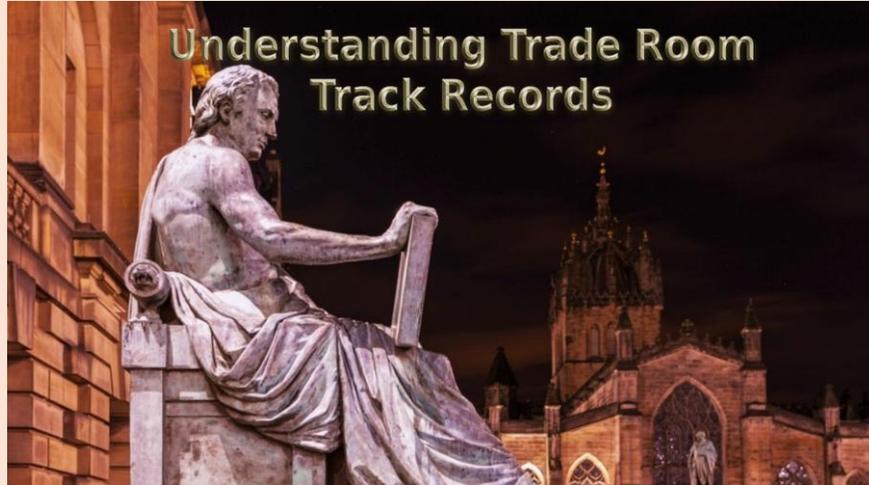

EFT is a futures journal established to bring truth and understanding to the world of human trade rooms. Retail traders are bombarded with advisements of trade rooms that achieve great wealth, financial success and spectacular profits. Furthermore, over 200 new rooms formed every year since 2012, so

the number of choices is overwhelming. ETF evaluates trade rooms by three criteria: posting of a truthful track record, achieving a net profit of \$50K per year and trading transparently in real time. EFT has directly evaluated all known trade rooms (nearly 1200) to help the retail trader select those that meet the selected criteria. ETF also evaluates track records, methods, strategies and other aspects of trading. Publication will be on a quarterly basis.

Dean A Handley, PhD, MBA, JD. Editor-In-Chief. Dr. Dean is first author on nearly 120 peer-reviewed papers in prestigious medical, scientific and business journals. In the past many years of futures trading Dr. Dean has been openly critically of futures trade rooms that sell products and services that are not in the best interests of traders. This confrontation has gone on for 5 years, in over 50 publications and over 200 formal documented complaints to the CFTC and other agencies. His publications include papers and videos in the field of futures trading, trade ethics and law, mathematical evaluations of trade profits and effective selection of best trade rooms and trade rooms to avoid. Previously an Associate Editor for MarketClips, Dr. Dean has established truthful, transparent and profitable the mantra for trade room evaluation. His publications, presentations and videos are located at: globaltradetitans.com.

Editorial Staff: in final selection

Individual Contributions: Individual retail traders may submit articles that establish room value, integrity and truthfulness or the direct lack of these qualities and attributes. Guidelines for submission are in final review but will involve submission according to an established format, required content and specific analysis.

This paper is a first of its kind – a truthful, mathematically driven, detailed analysis of posted track records like nothing you have ever read. I generated this educational conspectus to form a standard method to assess posted records. I use all current 2016 data available (7 months) as of the final writing of this article, convert it into gross P/L normalized to 3 contracts/trade, then to net P/L by removing round trip costs. Extrapolating 7 months data to 12 months (for annualized returns) and standardizing to a \$10,000 starting account, I will establish the 2016 projected net percentage profit from each record of the following rooms:

This publication is an unprecedented summary and comprehensive analysis, correlation and comparison of trade room track records. It will equip you with the understanding and approach I use to establish trade room worthiness and value.
